About

I am a Software Developer with eight years of experience, who has proven background in designing and implementing complex apps and systems. I have expert knowledge of the SW development life cycle, including design, coding, testing, debugging, deployment and maintenance. I'm highly self-organized, with a proven ability to handle full SW development/release cycle, and particularly passionate about app architectures and automation of work processes. I'm keen on sharing my knowledge with the rest of the programming community through articles on Medium , as well as contributing to the open source projects on GitHub. I'm a quick learner with a thirst to expand my already vast knowledge, and I excel at conceptualizing and implementing new and innovative ideas to help organisations reach their goals.

Experience

Bank Hapoalim Ltd.

September 2019 - Present

Lead iOS Developer

🔗 <https://www.linkedin.com/company/bank-hapoalim/>

Leading an iOS development as part of a technical team, providing a cross-application solutions across the bank products and successfully integrating it into existing systems.

- Creating a full documented iOS framework from scratch, including automated release cycle
- Writing technical articles related to Swift language and iOS development
- Open-sourcing part of the solutions created during the development process
- Consulting other teams for their products across the company
- Refactored the whole user authentication process into one easy-to-use SDK. Now, any applicaiton using auth doesn't have to deal with a complexity of the authentication process, but only integrate the newly created SDK and call its API
